Version

This document is released as Version 1.0 of Kris's WCAG 2.1 AA Checklist and incorporates all of my previous writings.

The official publish date of this document is April 24, 2021.

Later versions of this document will be published (to make corrections, supplement and improve material, etc).

The latest, current version of this document can always be found at <https://accessible.org> and supersedes any previous versions. If a newer version is available, use of previous versions should be discontinued.

In Memory of Graham

Graham was an unexpected hospice adoption. Originally the plan was for him to be a foster but it was discovered that he was terminally ill with an expectation that he only had one to two months to live. Graham amazingly lived 10 months despite having stage 4 kidney disease, prostate cancer, severe arthritis, and other ailments.

Graham had lived most of his life in a cage but he was determined as I've ever seen any dog to have fun. He loved to rumble and wreak havoc. In the picture above, he was caught reveling in a turned over box of clothes that were to be donated.

Another time I caught him chewing on the dishwasher soap compartment for absolutely no reason. There was also a towel that hung off a kitchen island rack that he made of a tradition of yanking down to the ground, again with no reason other than he felt like it.

And one more Graham anecdote - one time he came across the remnants of a large discarded cardboard box and flopped over and rolled back and forth in the cardboard rubble and the assorted Styrofoam and plastic coverings.

He destroyed some stuff but only in the cutest of ways and never my shoes or clothes. I would have adopted Graham 10/10 times. He was one of the greatest dogs with the best personalities; he really and truly just loved to live life and it was written all over his face. I really do believe that's how he ended up living so long despite terminal illness and his age (he was a senior when adopted).

There are too many amazing senior dogs in shelters and rescues. One big plus to adopting a senior – or a hospice senior – is you're not signing up for a lifetime of commitment but you know you'll make that dog extremely happy and provide the best last part of their life for them.

Introduction

I highly recommend you read my brief [explainer](#) before you read my checklist.

After my explainer is a very quick and concise checklist to give you a solid idea of what each WCAG success criterion is asking for.

This is by no means a comprehensive checklist. Additional explanation is needed to fully understand the essence of (and details and exceptions to) each success criterion.

Here's a loose illustration for context: For a given success criterion, I may have condensed 1,000 words into 25.

Think of my checklist as a cheatsheet you can study while cramming the night before the exam. The cheatsheet will help you score points on the most important concepts tested but you will be missing key information on the specifics.

For example, my cheatsheet tells you that closed captions are necessary but do you know the difference between closed captions and subtitles?

To get a full and complete understanding of each success criterion, I recommend you read the [W3C source documentation](#).

Further, my full WCAG guide, Kris's WCAG 2.1 AA Guide, is available for free at <https://accessible.org>.

Also, you can purchase my [ADA Compliance Course](#) which includes a full WCAG section that acts as a simple, easy to understand supplement to the W3C official documentation.

Attribution

I want to make three things very clear:

- 1) When written, this checklist, myself, my company (Kris's WCAG 2.1 AA Checklist, Kris Rivenburgh, and Accessible.org) are not affiliated or associated with W3C, WAI, WCAG, or any W3C initiatives in any way. I may participate in W3C activities at some point but this checklist is completely independent and separate of the W3C.
- 2) WCAG is the source of any material web accessibility and technical information that I present in this checklist. The W3C and WAI gets all credit for any material ideas, recommendations, guidelines, specifications, etc.
- 3) All I have done is condensed, rewritten, interpreted, and presented WCAG's material information in an informal, less technical manner.

Here is full attribution to W3C:

Copyright © 2017-2018 World Wide Web Consortium [W3C](#)® ([MIT](#), [ERCIM](#), [Keio](#), [Beihang](#)). This software or document includes material copied from or derived from [WCAG 2.1](#) as well as the informal [Understanding WCAG 2.1](#) and [Techniques for WCAG 2.0](#) documents. Source [W3.org](#).

Accessibility

PDF/UA and WCAG 2.0 AA standards were followed in the creation of this document.

If you have any difficulty accessing the contents of this document, contact me at kris@accessible.org and I will ensure that you have full access to this checklist.

Disclaimer

By reading this document, you agree to release Author/Creator/Publisher, [Kris Rivenburgh](#) and [Accessible.org](#), from any and all liability resulting from your use of this document.

This checklist is an interpretation of WCAG 2.1 AA success criteria by one person. This will not fully convey all information found in WCAG 2.1 AA. Moreover, this checklist may be inaccurate or misrepresentative of the information contained in WCAG 2.1 AA.

By continuing to read this checklist, you understand that it will be incomplete and may be inaccurate. You agree not to hold the Author/Creator/Publisher of this checklist (or any of his businesses/companies) liable for any reliance upon this document.

You further agree to base your ultimate web accessibility decision-making on the original [WCAG 2.1 AA source document](#) itself and not this checklist.

The material in this checklist is provided “as is” and without warranties of any kind express or implied. The Author/Creator/Publisher disclaims all warranties, express or implied, including, but not limited to, implied warranties of merchantability and fitness for a particular purpose. The Author/Creator/Publisher does not warrant or make any representations regarding the use or the results of the use of the materials in this checklist in terms of their correctness, accuracy, reliability, or otherwise.

Under no circumstances, including but not limited to, negligence, shall the Author/Creator/Publisher be liable for any special or consequential damages that result from the use of, or the inability to use this checklist. In no event shall the Author/Creator/Publisher’s total liability to you for all damages, losses, and causes of action exceed the amount paid by you, if any, for this checklist. You agree to hold the Author/Creator/Publisher and any connected principals, agents, or entities free from any and all liability for all claims for all damages except for claims of gross negligence and intentional wrongdoing. Note that applicable law may preclude the exclusion of implied warranties or the limitation of damages so these may not apply to you.

You agree that any and all claims for gross negligence or intentional tort shall be settled solely by confidential binding arbitration per the American Arbitration Association’s commercial arbitration rules. All arbitration must occur in the municipality where the Author/Creator/Publisher’s principal place of business is located, Dallas, Texas at the time of publication. Your claim cannot be aggregated with third party claims. Arbitration fees and costs shall be split equally, and you are solely responsible for your own attorney’s fees.

Your use of this checklist and engagement of any activities mentioned in this checklist means that you are legally bound to these terms. You should always conduct your own due diligence engaging in activity that potentially has large financial risks or expenditures.

No links to external third-parties constitutes an endorsement or recommendation of any kind. Keep in mind that domains expire and pages are taken down so some links may no longer work (or may go to unknown websites) when you access this checklist.

If you have any questions or reservations about the legal terms, conditions, and/or copyright of this checklist, contact me at kris@accessible.org.

As a condition to use of this document, you must agree to all terms herein prior to use of this document. By continuing, you agree to all legal terms, disclaimers, copyright, and other conditions.

Explainer

WCAG stands for the Web Content Accessibility Guidelines which is a set of technical standards to make digital assets (e.g., websites, mobile apps, etc.) more accessible to persons with disabilities. WCAG is authored by the Web Accessibility Initiative (WAI) under the W3C.

There are currently three versions of WCAG (1.0, 2.0, 2.1) and three conformance levels (A, AA, AAA). Another version, 2.2, is expected to be released in mid-2021.

Level AA conformance is all that is required for legal compliance with laws across the world.

Version 2.0 is best viewed as the classic version. It was published in 2008 and provides a strong baseline for accessibility.

Version 2.1 is the current version. It was published in 2018 and includes key mobile considerations. WCAG 2.1 AA conformance is highly recommended. Although 2.0 AA conformance is a very strong start, 2.1 AA conformance is even better.

Each version and conformance level is comprised of success criteria. Each success criterion is a requirement under WCAG. To be fully WCAG conformant, your digital asset must meet all success criteria under a given version and conformance level.

WCAG 2.1 AA includes all of the success criteria found in WCAG 2.0 AA with 12 new success criteria added in. Thus, conformance with WCAG 2.1 AA will result in conformance with WCAG 2.0 AA.

There are 38 success criteria in WCAG 2.0 AA.

There are 50 success criteria in WCAG 2.1 AA.

This checklist begins with the 38 WCAG 2.0 AA success criteria. These 38 success criteria are essential to creating a good foundation of accessibility for your digital asset.

The remaining 12 success criteria in WCAG 2.1 AA build on that foundation to make your asset's accessibility foundation even stronger and more robust, particularly on mobile devices.

WCAG 2.0 AA Checklist

Section 1: Alternatives

Alt text (1.1.1): All images and non-text content that conveys necessary meaning or information needs a text alternative.

Video & Audio alternatives (1.2.1): All video-only and audio-only content has a text transcript. Transcripts are clearly labeled and available near the media.

Closed captioning (1.2.2): All video with sound has closed captioning.

Audio description (1.2.3): For any video where meaningful information is not available audibly, add a transcript or an audio description describing that information.

Live captions (1.2.4): More formal, live presentations must have closed captions.

Audio description (1.2.5): An audio description is optional under 1.2.3 level A but not in 1.2.5 AA. The best route is to provide both a transcript (optional) and an audio description but the audio description is required.

Section 2: Presentation

Website structure (1.3.1): Use proper HTML markup techniques to structure your website's content.

Meaningful order (1.3.2): Present content in a meaningful order and sequence so that it reads properly.

Sensory characteristics (1.3.3): When providing detailed instructions, make it so they aren't reliant on a single sensory ability.

Use of color (1.4.1): Do not rely on color alone to convey information.

Audio control (1.4.2): Any audio must be able to be paused, stopped, or muted.

Color contrast (1.4.3): There must be a color contrast ratio of at least 4.5:1 between regular text and background and 3:1 for large text.

Text resize (1.4.4): Text must be able to be resized up to 200% without negatively affecting the ability to read content or use functions.

Images of text (1.4.5): Do not use images of text unless necessary (e.g., logo).

Section 3: User Control

Keyboard only (2.1.1): All content and functions on a website must be accessible by keyboard only (i.e., no mouse).

No keyboard trap (2.1.2): Keyboard-only users must never get stuck on any part of the website; they must be able to navigate forwards and backwards.

Adjustable time (2.2.1): If there any time limits on a website, users have the ability to turn it off, adjust it, extend it.

Pause, stop, hide (2.2.2): If there is content that blinks, scrolls, moves, users must have the ability to pause, stop, or hide it.

Three flashes or below (2.3.1): Web pages do not contain anything that flashes more than three times in any one second period.

Skip navigation link (2.4.1): A “Skip to Content” or “Skip Navigation” link allows users to bypass the header / menu and go straight to the main content.

Section 4: Understandable

Page titles (2.4.2): Each page of a website needs to have a unique and descriptive page title.

Focus order (2.4.3): Users must be able to navigate through a website in a logical, sequential order that preserves meaning.

Link anchor text (2.4.4): The purpose of each link should be clear based on its anchor text (e.g., don't use “click here”, etc.).

Multiple ways (2.4.5): There are multiple ways to access different pages/information on a website (e.g., search bar, nav menus, sitemap, breadcrumbs, etc.).

Descriptive headings and labels (2.4.6): Headings and programmatic labels must be clear and descriptive. They do not need to be lengthy.

Focus indicator (2.4.7): Any “user interface control” that receives focus from a keyboard user should have a focus indicator that indicates that focus visually.

Website language (3.1.1): Set the language for your website.

Language changes (3.1.2): Indicate any language changes for an entire page or within the content.

Section 5: Predictability

No focus change (3.2.1): Nothing changes merely because an item receives focus; a user must actively choose to activate an item (e.g., hit enter to submit) before a change takes place.

No input change (3.2.2): Nothing changes just because information is inputted into a field (e.g., form doesn't auto submit once all fields are filled out).

Consistent navigation (3.2.3): Keep navigation links / layout consistent throughout all pages of the website (i.e., same links in the same order).

Consistent identification (3.2.4): Components that have the same function within a website are identified consistently (but not necessarily identically).

Error identification (3.3.1): Make any form errors easy to identify, understand, and correct.

Form labels and instructions (3.3.2): Programmatically label all form or input fields so that a user knows what input and what format is expected. Also, provide sufficient instructions and descriptions where applicable.

Error suggestions (3.3.3): If an input error is automatically detected, then suggestions for correcting the error should be provided.

Error prevention on important forms (3.3.4): For pages that create legal commitments or financial transactions or any other important data submissions, one of the following is true: 1) submissions are reversible, 2) the user has an opportunity to correct errors, and 3) confirmation is available that allows an opportunity to review and correct before submission.

Parsing (4.1.1): Make sure HTML code is clean and free of errors, particularly missing bracket closes. Also, make sure all HTML elements are properly nested.

Name, role, value (4.1.2): For all user interface components (including forms, links, components generated by scripts), the name, role, and value should all be able to be programmatically determined; make sure components are compatible with assistive technology.

WCAG 2.1 AA Checklist

Note: 2.1 AA includes all of the preceding 2.0 AA success criteria plus the success criteria below.

Orientation (1.3.4): Your website does not lock on portrait or landscape, unless necessary.

Input (1.3.5): Make it so forms can autocomplete information for users.

Reflow (1.4.10): Ensure someone can zoom in on your website without requiring scrolling or causing poor experience.

Non-text contrast (1.4.11): All meaningful non-text content on your website should have 3:1 color contrast with the background.

Text spacing (1.4.12): Make sure your text spacing is able to be adjusted without causing a poor experience.

Content on hover or focus (1.4.13): Make it so any additional content (e.g., pop-ups, submenus) can be dismissed or remain visible if the user desires.

Keyboard shortcuts (2.1.4): If you have a keyboard shortcut, make sure a user can either 1) turn it off, 2) there's a way to add another key in the shortcut, and/or 3) have the shortcut only active while focusing on a specific component.

Pointer gestures (2.5.1): Provide simple alternatives (e.g., single tap vs. swipe) to potentially complex finger motions on touch screens.

Pointer cancellation (2.5.2): Provide a way to cancel the trigger action when you click down on a mouse or press down/touch with your finger.

Label in Name (2.5.3): Make sure any programmatic labels you make are aligned with the corresponding visual text.

Motion Actuation (2.5.4): For any functions that are activated by motion, provide a simpler, alternative means of action. Also, give users the option to turn off motion activation.

Status Messages (4.1.3): When a status message appears, it should be coded with role or properties so that people using assistive technologies (e.g., screen readers) are alerted without losing focus.

Products

I have two accessibility products for sale.

First, my ADA Compliance Course. This course is specifically designed to quickly help anyone understand how to 1) lower litigation risk and 2) understand, organize, and prioritize WCAG success criteria.

Second, my Accessibility Statement template. This template was written with best practices as extracted from Department of Justice (DOJ) private enforcement actions.

The DOJ regulates and enforces Title II and Title III of the ADA.

Here are my channels and websites:

<https://www.linkedin.com/in/krisrivenburgh/>

<https://medium.com/@krisrivenburgh>

<https://krisrivenburgh.com>

<https://adabook.com>

<https://accessible.org>

The ADA Compliance Course is my personal course on how to best prevent litigation against your website or mobile app.

In this course, you will learn:

- What the best practices for ADA website compliance are (as interpreted from DOJ private enforcement actions and litigation activity)
- What each WCAG success criteria is asking for (along with extended explanations, examples, illustrations, and curated resources)
- How to prioritize accessibility issues for risk mitigation
- What roles should be responsible for success criteria (this can help with designating or outsourcing work)

The ADA Compliance Course contains the exact steps I recommend to immediately reduce your risk and follow best practices for ADA website compliance.

I'm an attorney who researches digital accessibility and related law and litigation.

You can learn more about the ADA Compliance Course at [Accessible.org](https://accessible.org).

If you have any questions, you are welcome to contact me at kris@accessible.org.

Thank you very much.
